

Wireshark Display Filter Cheat Sheet

10+ Essential Filters with Descriptions

#	Filter	Description
1	<code>http</code>	Shows only HTTP traffic
2	<code>dns</code>	Shows only DNS queries and responses
3	<code>arp</code>	Shows only ARP request/reply packets
4	<code>tcp</code>	Shows all TCP traffic
5	<code>udp</code>	Shows all UDP traffic
6	<code>ip.addr == 192.168.x.x</code>	Filters traffic to/from a specific IP address
7	<code>tcp.port == 80</code>	Shows traffic on port 80 (HTTP)
8	<code>http.request.method == "GET"</code>	Shows only HTTP GET requests
9	<code>frame contains "password"</code>	Searches all packets for the string "password"
10	<code>icmp</code>	Shows only ICMP (ping) traffic
11	<code>tcp.flags.syn == 1</code>	Shows TCP SYN packets (connection attempts)
12	<code>!(arp or dns)</code>	Excludes ARP and DNS, showing everything else

Tips for Using Filters

- Combine filters using 'and' / 'or': e.g. `http and ip.addr == 192.168.1.1`
- Use '!' to negate a filter: e.g. `!arp` hides all ARP packets.
- Right-click any packet field in Wireshark and choose 'Apply as Filter' to auto-generate filters.
- Use 'contains' for keyword searches inside packet data.
